

**Date:** April 16, 2009

**To:** All FuelOnly, Inc. Clients

**From:** Eric Dekker, Lead Chemist/Supervisor, FuelOnly, Inc.

**Subject:** Reduced sample requirement for Cetane Number

FuelOnly can now offer Cetane Number analysis for our clients without the need for the high volume that was once required. Previously according to ASTM D613 it required an entire liter (1000 mls) to obtain a Cetane Number result, now according to ASTM D6890 as an approved alternative method, with only 200 milliliters FuelOnly, Inc. can provide a Cetane Number through our network of state of the art laboratories. This means reducing the amount of sample required with no increase in cost to our clients, and still receiving results within the same turn-around time, and with the same great service that you've come to expect from FuelOnly, Inc.
