

FuelOnly Opens New Testing & Research Facility

New Larger Facility Increases Company's Testing, Research & Production Capabilities

Vancouver, WA – December 8, 2009 – FuelOnly Inc. announced today that it recently moved into new larger testing facilities. In support of its local community, the company has located itself in the heart of the west side of downtown Vancouver, WA, where the city has been undergoing a substantial revitalization effort. The goal of the city's revitalization effort is to create a vibrant downtown that blends government, business, recreation, and culture into a safe and desirable place to work and live.

Mark Artalejo, FuelOnly's President, commented, "We are very excited about our new facility. Participating in the revitalization of downtown Vancouver is something we genuinely wanted to be part of. It's been great to see all of the positive change happening to the local Vancouver business community. We're very happy to do our part."

The new facility features advanced technologies for testing diesel and biodiesel fuels, as well as a much expanded production capability that will allow the company to keep up with its rapidly expanding customer base and increasing fuel sample volume. In addition, the facility has been designed to be as energy efficient and environmentally green as possible, which includes everything from how the company recycles its test samples and reagents to the light bulbs in their fixtures.

"Another great thing about our new facility is that we now have a training center," said Mr. Artalejo. "FuelOnly plans on offering customers complete training and instruction on a variety of diesel and biodiesel related topics as part of its continued effort to provide superior quality customer service."

FuelOnly's new location is at 901 W. Evergreen Blvd, Suite 100, Vancouver, WA 98660. You can get directions at the company's website at www.fuelonly.net.

About FuelOnly, Inc.

FuelOnly is an industry leading fuel analysis, testing and research laboratory. The company specializes in providing only high quality fuel analysis and testing services to commercial and industrial businesses. By focusing on fuel analysis and testing services, the company is able to provide superior quality analysis, a high degree of personalized customer service, and sample turn-around times far superior to other fluids testing laboratories.

FuelOnly focuses a significant amount of its activity on research for improving advanced technology, compression ignition engine efficiency, meeting emissions standards and bio-fuel development. FuelOnly is an industry leader, looked to by government agencies, production facilities and small producers alike for innovative, scientific answers.
